

IMPLEMENTATION OF AN IDENTITY GOVERNANCE SOLUTION SUCCESS STORY

Construction Sector

OVERVIEW

Our client was looking for a specialized IT partner to provide an identity governance management solution. To create the most secure environment and meet the businesses needs, the IT and business teams worked together to define the security policy and controls.

The objective was for the client to be autonomous in the operation of the solution at the end of the project. The solution had to meet various specifications and integrate with the client's existing environment and technology infrastructure including:

SERVICES

Governance & Business

- Solutions Architecture Consultant
- Implementation Team

Project Management

- Project Management Consultant

IT Modernization & Cloud

- Cloud Architecture Consultant

TECHNOLOGY ENVIRONMENT

Active Directory Azure AD Exchange HR systems Main Frame Microsoft SQL
 NTFS permissions Top Secret SAP Server Review of user access and requests

RESULTS

Our team created a single, centralized view of identities and a single repository of rights and access. Both internally and in the cloud, we were able to provide the ability to coordinate IT with the client's business departments for an efficient and effective governance solution.
