REINFORCEMENT AND MODERNIZATION PROGRAM SUCCESS STORY

Insurance Sector

OVERVIEW

Our client came to us with the goal of redesigning their technology foundation to be competitive within their market. Their Reinforcement and Modernization Program consisted of a technology foundation upgrade and included three major components:

1

Setup of an expertise center for governance and cloud computing implementation

2

Replacement of the insurance administration platform

3

Migration of infrastructure to cloud services, such as database servers

THE CHALLENGE

The needs of our client included 15 major projects grouped into a single program when we broke ground on this modernization. They decided to work with ESI and Virtual Guardian as technology partners to ensure an efficient process.

REINFORCEMENT AND MODERNIZATION PROGRAM SUCCESS STORY

Insurance Sector

TECHNOLOGY ENVIRONMENT

- Azure
- AWS
- Windows
- Unix
- Linux
- MS - SQL
- DB2
- Informix
- Citrix
- VDI
- M365
- Sharepoint
- Networking DMZ
- SD - WAN
- Segmentation and Cloud access management

OUR WORK

We established a partnership agreement with the client providing a diverse set of services to meet all of their project needs. In this case those primarily include:

Cybersecurity

Telecom/security solution architect consulting for technology choices, design, integration, and implementation of network and security solutions for the new technology foundation.

Governance & Business

Infrastructure solution architecture consulting (Windows/Azure profile) for technology choices, design, integration and implementation of Microsoft and M365 solutions.

IT Modernization & Cloud

Consulting in cloud governance, responsible for the implementation of the cloud expertise center and the framework for the use of the various tools.

Professional Services

Conducting various analyses (collaboration tools, Linux, security) in order to support the client's team in the execution of the transformation.

RESULTS

In this partnership, ESI and Virtual Guardian provide complimentary services in modernization expertise and cybersecurity support that are critical in the implementation of this project. With the modernization to conclude in 2025, we are on track to deliver on all of our established goals.
